### Adopted Standard

**Blood Services Standard 1 (BS S1)**

For donor services, the Quality Manual shall include a protocol that defines the qualifications of personnel who respond to donor reactions.

### Adopted Guidance

10NYCRR Section 58-2.6(a) requires that medical services for emergency care of the donor be available. As a minimum, when performing donor collection procedures, a nurse or other qualified person specially trained to recognize and treat donor reactions should be immediately available (within approximately ten seconds or audible calling distance) and a physician should be available by telephone for consultation. Persons drawing blood for transfusion should also be trained to recognize donor reactions.
**Deleted Standards:**

</table>
| **Blood Services Standard 3 (BS S3)** | Blood and blood products must be stored under appropriate conditions that include an adequate temperature alarm system that is regularly inspected.  
  a) an audible alarm system must monitor proper blood and blood product storage temperature over a 24-hour period.  
  b) inspections of the alarm system must be documented.  
  Please refer to General Systems Quality Control Standards. |
