# NEW YORK STATE DEPARTMENT OF HEALTH WADSWORTH CENTER Clinical Laboratory Evaluation Program – Blood Resources

Intake #	
(DOH Use only)	

## Transfusion/Blood Bank-related Incident and/or Serious Adverse Reaction Report

Facility name/city	 Lab PFI#
Facility name/city	 Lab Pri#

## Instructions for reporting

Transfusion/Blood Bank-related incidents and/or serious adverse reactions must be reported to the department's Wadsworth Center within seven calendar days of the occurrence or its discovery.

### Events that must be reported include, but are not limited to:

- Serious (severe) unexpected adverse reactions and incidents involving blood components that have been issued by the transfusion service
- All incidents, including near miss events, resulting in transfusion of a blood or blood component to a wrong patient
- Patient bedside identification not performed or performed incorrectly
- Issuance of incorrect product or unit for a specific patient
- Specimen labeling errors if a patient specimen used for a crossmatch was collected from the wrong patient or labeled with erroneous patient identifiers, and the blood component was issued for transfusion
- Pre-transfusion testing errors of the recipient blood, if a patient sample was used in crossmatching blood or blood component that has been issued for transfusion
- Errors or accidents in collecting, testing, or processing of donor blood that are not detected prior to distribution and that may affect the safety of any product or health of the donor or recipient, including serious donor reactions

The decision to report should be based on whether the event had the potential to affect the safety or purity of any product, or the health of donor or recipient.

#### **Definitions**

**Incidents** related to transfusion include **errors** and **accidents** which may affect the safety, purity or potency of blood product, or health of the donor or recipient. An incident may or may not result in an adverse reaction in a transfusion recipient.

An **error** is a deviation from the requirements specified in Subpart 58-2 of Title 10 of the New York State Codes, Rules and Regulations (10 NYCRR), or the Code of Federal Regulations (CFR), or a significant deviation from the facility's Standard Operating Procedures (SOPs).

An **accident** related to transfusion is an unexpected or unforeseeable event not traceable to a deviation from Subpart 58-2 of 10 NYCRR, CFR or the facility's SOPs

**Serious (severe) adverse reaction** related to transfusion is reportable if the reaction is fatal or life threatening, results in hospitalization (initial or prolonged), disability/permanent damage, or required intervention to prevent permanent impairment.

#### What not to report:

- Non-severe adverse reactions to transfusion
- Errors and accidents that were detected prior to distribution and/or issuance of blood or blood components for transfusion
- Errors and accidents that did not have potential to affect the safety or purity of blood or blood component or health of donor or recipient
- Labeling deviation that does not result in erroneous patient identification. A deviation from protocol is a
  nonconformance that must be investigated by the blood bank, but is not reportable unless there is risk of
  erroneous patient identifiers
- Post-donation information
- Post-donation reactions that occured more than 30 minutes or after the donor has left the premises of the donation location
- Positive bacteria detection testing on platelets, absent a process error or severe transfusion reaction
- Nursing/Medical staff errors related to monitoring patients during transfusion, or reporting transfusion reactions,
   absent adverse patient effect
- "Lookbacks" performed by the facility, absent infectious disease transmission in a transfusion recipient
